<b>Title</b>	Anti-theft method for the number code of mobile telephone
<b>Abstract</b>	<p>The said method makes the user of mobile telephone capable of preventing theft actively. The said method includes adopting EEPROM as hand set memory for MIN code or IMSI code related to hand set account; setting cipher re-writing program, re-writing password and cipher mode; opening to the user of hand set the user part of information base files in mobile communication network management system so that the user can change the redundant part of cipher and personal file code in information base through special service line and make the re-written hand set cipher consistant with that in the user file of management system.</p>
<b>IPC</b>	H04Q 7/22
<b>Field Code</b>	39B39A
