(54) Abstract Title

Grip for golf club

(57) A large diameter grip for a golf club, particularly a putter, comprises a large diameter tubular walled hollow grip member 15, a bush 19 and an end cap 18, wherein when fitted to a golf club shaft 13 a void 25 is formed within the grip. The shaft 13 may extend the length of the grip member, Figure 2, or may terminate at the beginning of the grip (Figure 7). A kit of parts may be provided, loosely assembled on a core member (40, Figure 4) including a split bush 19, an end cap 18 and a hollow tubular grip member 15, for retro-fitting to an existing golf club thereby forming a golf club with a substantially larger grip. The grip may be made from carbon fibre and have a non-slip, non-shock absorbent coating 34 applied to promote the feel of the golf club.
